

PROCESS FOR POLYMERIZING CATIONICALLY
POLYMERIZABLE MONOMERS

ABSTRACT

5

The invention relates to a new catalyst system that improves the heat transfer capability of a butyl reactor slurry process system in the production of isobutylene-based polymers in continuous slurry polymerization processes. The process is carried out in an anhydrous polymerization system containing a mixture of the monomers in a polar diluent along with a Lewis acid and a C₅ or greater initiator having a tertiary halide.
